ELEVATE. SECURE. SCALE.

01 · THE PROBLEM

They look the same.
They solve different problems.

All three tools promise productivity. Only one fits the way your team actually works. Pick on hype and you pay for seats nobody uses.

1

Shelfware seats

Companies buy per-seat licenses, then watch adoption stall. Unused AI seats are the new unused software shelfware.

2

Overlapping subscriptions

Two tools doing the same job, two renewals, no owner. Costs compound quietly month after month.

3

Shadow AI risk

Staff paste company data into personal accounts. The exposure happens before IT ever approves a tool.

The ITneck rule: buy the workflow, not the logo. Map the task first — content, office work, or deep analysis — then choose the tool.

02 · TOOL DEEP DIVE

ChatGPT Enterprise is the automation engine.

Built for rapid content, automated workflows, and custom GPTs trained on your own processes.

Strengths

- Fastest content output — drafts, campaigns, and variants in seconds
- Custom GPTs that encode your SOPs and brand voice
- Largest ecosystem of integrations and connectors
- Strong for marketing, operations, and support teams

Watch-outs

- Custom pricing — reported around $60/seat/month, ~150-seat minimum, annual prepay
- Needs governance or custom GPTs sprawl fast
- ROI depends on workflow redesign, not just chat

Best for

Marketing, ops & automation-heavy teams that need ideas and workflows at speed.

02 · TOOL DEEP DIVE

Microsoft Copilot lives inside Office.

Deeply integrated into Word, Excel, Teams, and Outlook via Microsoft Graph — no new app to learn.

Strengths

- Zero workflow change — AI where work already happens
- Respects existing Microsoft 365 permissions and labels
- Meeting recaps, email drafting, and Excel analysis in-app
- Enterprise compliance inherits your M365 posture

Watch-outs

- $30/seat/month on top of a qualifying M365 license
- True all-in cost often $69-90/seat/month
- Weak outside the Microsoft stack

Best for

M365-native companies and admin & communication-heavy roles.

02 · TOOL DEEP DIVE

Claude Team is the precision tool.

A huge context window and careful reasoning make it the choice when accuracy matters more than speed.

Strengths

- Massive document analysis — contracts, research, codebases
- Complex logic and multi-step reasoning
- Code review with high data accuracy
- Clear, well-structured long-form output

Watch-outs

- $25/seat/month ($20 on annual, 5-seat minimum)
- Smaller integrations ecosystem than the other two
- Fewer native office-suite hooks

Best for

Legal, finance, engineering & research teams doing heavy analysis and code review.

03 · THE ITNECK MATRIX

Side by side, no hype.

All three enterprise tiers exclude your business data from training by default. That is the key cybersecurity point.

	ChatGPT Enterprise	Microsoft Copilot	Claude Team
Price per seat	Custom, ~$60/mo reported	$30/mo + M365 license	$25/mo ($20 annual)
Minimum seats	~150	1 (with qualifying plan)	5
Data used for training?	**No — excluded by default on enterprise tiers.** Verify in your signed agreement.		
Compliance	SOC 2, GDPR; HIPAA via BAA	SOC 2, GDPR, HIPAA-ready in M365	SOC 2, GDPR; HIPAA via BAA
Key integrations	Custom GPTs, API, connectors	Word, Excel, Teams, Outlook, Graph	Docs, code, API, projects
Standout strength	Automation & ideas	Daily office workflows	Heavy analysis & code
Best for	Marketing & ops	M365-native teams	Legal, finance, eng.

Verdict: fastest engine for content and custom workflows.

Verdict: lowest friction if you already live in Microsoft 365.

Verdict: deepest thinker for documents and code.

04 · SECURITY

7 questions to ask before any AI touches company data.

Question	ChatGPT Ent.	Copilot	Claude Team
1. Training-data exclusion by default?	Yes	Yes	Yes
2. SSO / SCIM provisioning?	Yes	Yes (Entra ID)	Yes
3. Audit logs?	Yes	Yes	Yes
4. Data residency options?	Options	Via M365 regions	Options
5. DLP compatibility?	Via gateway	Native Purview	Via gateway
6. BAA available?	Yes	Yes	Yes
7. Shadow-AI policy needed?	Yes for all three — publish an approved-tools list and block personal accounts on company data.		

Ratings reflect enterprise-tier vendor documentation at publication. Confirm current terms in your agreement before signing.

05 · ROI

The math that decides the purchase.

(Hours saved x fully-loaded hourly cost x adoption rate) - total license cost

Worked example: 50-person team

- 50 seats x $30 = $1,500/month license cost
- Each active user saves 3 hours/month at $45/hour loaded = $135 value
- At 60% adoption (30 active users): $4,050 value - $1,500 = **$2,550/month net**
- At 20% adoption (10 active users): $1,350 value - $1,500 = **-$150/month (shelfware)**

Shelfware math: per-seat pricing punishes low adoption. Pilot with 10-15 power users, measure hours saved, then scale. Never roll out to everyone on day one.

06 · DECISION

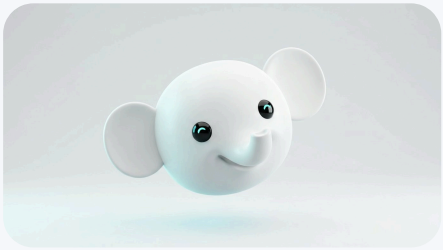

Which AI should you buy?

1. Are you all-in on Microsoft 365? Yes → start with Copilot. No → go to 2.

2. Is your work document- or code-heavy? Yes → Claude Team for analysis depth. No → go to 3.

3. Do you need custom GPTs and automation? Yes → ChatGPT Enterprise. No → pilot the cheapest fit first.

4. Still torn? You might need two: Copilot for daily office work plus Claude or ChatGPT for specialist teams. That is normal.

Your ITneck guide says: pilot small, measure, then commit.

07 · NEXT STEP

Don't deploy AI alone.

AI without governance creates risk. AI with the right partner creates leverage.

Readiness audit

We map your workflows, data, and risks before a single license is bought.

Secure deployment

SSO, permissions, DLP, and training-data controls configured correctly.

Governance & training

Policies your team follows and training that drives real adoption.
